## Quiz instructions

---

### Question 1

1 pts

Write a program that asks the user for their full name, splits it up into words and outputs each word on a new line. For names with 2 words (eg, 'Fred Frank') this would output Fred, then frank on two lines.

### Question 2

1 pts

Write a program that takes in 2 values one an email and one a number. Print the email address how ever many times the number says with the count prefixing the number. For example i enter 'bob@example.com' and the number '2', I will get an output of '1\_bob@example.com' and then '2\_bob@example.com'.
